

STRATA-Team has grown again

2009-05-01 From the beginning of May 2009 the STRATA team is supported by Mrs. Dipl.-Ing. Sabine Michels. She works as a Projektmanager and is in charge of projects in the field of city and regional planning as well as in the fields of mobility surveys and local city traffic. We are looking forward to a successful collaboration.

Mrs. Michels studied civil engineering at the University of Karlsruhe with focus on regional planning and infrastructure. Before she came to STRATA she was scientific assistant at the Institute for Urban and Regional Planning of the University of Karlsruhe. She took part in the project Raum+ and supported the development of a methodology for evaluating the potential of settlement areas.
